

Consolidated SEO Audit

homzrealtor.com · July 29, 2026

Indexation · Content Originality · Technical SEO · On-Page · Internal Links · Trust & Compliance · AI Visibility · Competitors · Content Strategy

45/100

Overall SEO Health · Early stage

The build quality is not the problem. The template is server-rendered, canonicals are clean, and the project page carries genuinely differentiated tooling (Investment Score, EMI and yield calculators, config-wise ₹/sq.ft). Two things are capping the site: **project descriptions are republished verbatim from SquareYards**, and **almost nothing is indexed** — the homepage does not rank for its own brand name. These are the same problem viewed from two ends.

Dimension	Score	Verdict
Indexation	30	Homepage absent for brand query; 2 deep pages found indexed, both Greater Noida
Content Originality	25	Project overviews are word-for-word SquareYards; images hotlinked from their CDN
Trust / E-E-A-T	30	RERA link points to the wrong state regulator; no policy pages; placeholder testimonials
AI Visibility (GEO)	38	Unverified — severe brand-name collision, zero third-party citations found
Schema Markup	40	Unverified — no JSON-LD observed; FAQ and breadcrumb content exists unmarked
On-Page SEO	60	Titles and meta are strong; layout bug, empty headings, counts that don't reconcile
Internal Linking	65	Compare + similar-project graph is genuinely good; homepage hub renders empty
Technical SEO	68	Solid Next.js/Vercel base, but stale cached builds are being served on some routes

Three dimensions are marked unverified — `robots.txt`, `sitemap.xml`, `llms.txt` and JSON-LD could not be fetched from this environment. If all four check out clean, the overall score moves to roughly 55. Section 9 lists exactly what to run.

1 · Indexation — 30/100

This is the headline finding and the one you asked about. Four live SERP samples, run today:

Query	Result for homzrealtor.com	Reading
HomzRealtor (exact brand)	Homepage does not appear	Two deep pages surface instead, both Greater Noida: the Saya South X project page and the Rise Food Mall vs Saya South X compare page. A site that cannot rank its own homepage for its own brand name is either not indexed at the root or being buried by brand competitors.
M3M Route 65 Sector 65 Gurgaon price floor plan	Absent from the full result set	Eight competitors present, including very small channel-partner microsites. Your page targets this query in its title tag exactly and does not appear.
homzrealtor Gurgaon project listing	Absent	Even with the brand token in the query, no listing page surfaces.
Saya South X Greater Noida price payment plan	Ranks roughly 4th	The single most encouraging datapoint in this audit. The page outranks Quikr, InvestMango and HedgeHomes. The template competes when a page is indexed and the content is unique.

Why Greater Noida is indexed and Gurgaon is not

The two pages that surfaced are both Greater Noida, and both are on the current build. The Gurgaon project page audited yesterday is being served from an older deployment (see Section 3). The Saya South X overview also contains substantial project-specific detail that does not appear on SquareYards, whereas the M3M Route 65 overview is a near-verbatim copy. That is a strong hint that **duplication, not crawl budget, is what is holding indexation back.**

Also worth knowing

- Google's cached snippet for the Saya South X page still shows the old title, "*Price, Floor Plan & Reviews*", while the live page now reads "*Price, Payment Plan & Location*". Google's copy is roughly a week stale — recrawl frequency is low.
- A true `site:` count could not be run from this environment. The numbers above are SERP-sample evidence, not a crawl census. **Google Search Console is the only authoritative source** and checking it is task one on the roadmap.

2 · Content Originality — 25/100

This is the structural problem underneath the indexation problem, and it was not on the dev fix list.

The M3M Route 65 overview on homzrealtor.com is **word-for-word identical** to the SquareYards page for the same project. Directly comparable, live on both domains today:

- The paragraph beginning "*Brought to you by M3M India, one of Gurgaon's most reputed developers...*" appears on both, unchanged.
- The "*Investment Opportunities at M3M Route 65, Sector 65, Gurgaon*" block appears on both, unchanged.
- The section headings *Location Advantage of...*, *Nearby IT Parks and Hubs*, *Social Infrastructure Highlights*, *Upcoming Infrastructure near...* are SquareYards' own heading structure.

The six empty headings are a symptom, not a bug

HR-27 in the dev sheet describes six headings on the Gurgaon page with no content under them. The reason is now clear: the scraper captured SquareYards' *heading* structure but the corresponding body fields were never mapped. Suppressing empty headings hides the symptom. The real fix is to stop rendering someone else's content architecture.

Compounding it: every project image, including `og:image`, is served from `static.squareyards.com`. You are publishing a competitor's copy, on a competitor's images, and asking Google to rank it above the original on a domain with vastly more authority. *Crawled – currently not indexed* is the standard outcome.

What to do instead

- **150–250 original words per project beats 400 scraped ones.** You do not need volume; you need a page Google has not seen before. Write from your own DB fields plus the developer brochure.
- **Lead with what SquareYards does not have.** The config-wise ₹/sq.ft table, the EMI and rental-yield calculators, the five-factor Investment Score with its breakdown, and the sector-level price comparison are all genuinely differentiated. Right now they sit below several hundred words of duplicated prose.
- **Self-host every image.** Cloudflare R2 or S3 behind your CDN. This also removes the referer-blocking risk flagged as HR-43.
- **Ask M3M and your other developer partners for their media kits.** As an authorised channel partner these are free, licensed, and higher quality than anything scraped — and they solve the missing floor plans at the same time.

3 · Technical SEO — 68/100

Confirmed healthy

- Server-rendered HTML — full content present without JavaScript execution, on every page checked.
- Self-referencing canonicals correct on all three pages sampled; consistent `www` host.
- Clean, semantic URL architecture: `/project-listing/{city}/{slug}`, `/project-listing/compare/{city}/{a}/{b}`, `/project-listing/{city}/sectors/{sector}`.
- Complete Open Graph and Twitter card set on project pages, with correct `og:image:width / height / alt`.
- Next.js image optimisation pipeline in use across the site.

Defect: routes are serving stale cached builds

The M3M Route 65 page is served from deployment `dpl_A5s6Mhwq...`. The homepage and the Saya South X page are on `dpl_5Xkir8Dx...`. The newer build carries fixes the M3M page does not:

- Single H1 instead of two (HR-47)
- RERA number rendered as a verification link (HR-49)
- Meta description truncated at a word boundary (HR-46)
- "*How we calculate this score*" disclosure on the Investment Score (HR-35)
- Duplicated content blocks removed (HR-26)
- Page title matched to actual page content (HR-45)
- Gallery tabs hidden when empty, real alt text on gallery images (HR-44)

Several fixes are shipped but invisible on a subset of routes. Anyone QA-ing against the M3M URL will conclude the work failed. Audit ISR `revalidate` settings, add on-demand revalidation on content publish, purge the CDN for the `project-listing` routes, then re-QA. This also matters for Google: it may be indexing old HTML.

Open

- Every image is requested at `w=3840` regardless of viewport — no `sizes` prop. Largest single mobile speed win available (HR-19).
- `robots.txt`, `sitemap.xml`, `llms.txt` could not be fetched here. Verify manually — Section 9.
- No CrUX field data expected at current traffic; use Lighthouse at `pagespeed.web.dev` as the proxy.

4 · On-Page SEO — 60/100

Titles and meta descriptions are the strongest part of the on-page work: unique per project, keyword-bearing, with location and intent modifiers. Breadcrumb trails render on every project page. The issues are structural rather than metadata.

Template-level, confirmed on both the old and current build

- **Footer renders in the middle of the page** on every project page. Roughly half the content — connectivity, amenities, specifications, related projects, FAQ — appears after it (HR-25). Still the single most damaging visible defect.
- **Hero badge wiring is mis-mapped site-wide, not a one-off.** On M3M Route 65, "*Minutes to the Metro ... 43m*" is the IGI Airport figure. On Saya South X, "*Minutes to the Metro ... 1m*" and "*Minutes to the Airport ... 21+*" — where 21 is the amenity count leaking into the airport tile (HR-30).
- **Connectivity Scorecard renders 1 of 4 rows on M3M and 0 of 4 on Saya**, while the distance and drive-time values float loose at the very bottom of the page, below the FAQ, alongside the schools table (HR-28, HR-29).
- **Counts do not reconcile.** Saya: "21 features across 4 categories" renders 2 categories; "Safety — 7 amenities" lists 4. M3M: "15 features across 4 categories" renders 2; "Safety — 5 amenities" lists 4 (HR-32).
- **Distance stated four different ways on one page.** Saya metro: badge "1m", overview "10 km", connectivity "8.7 km / 15 mins", What's Nearby "7.6 km".
- **"10 of everything"** still printed — 10 metro stations, 10 schools, 10 hospitals. That is the Places API page size, not a count (HR-31).
- **Currency formatting still mixed** within a single page: ₹61.91 Lakh alongside ₹12,38,200 and ₹42,982; FAQ uses "Lac" while the body uses "Lakh" and omits the symbol on the second figure (HR-37, HR-38).
- **Ready-to-move project shows a projection to possession.** Saya is Ready to Move with a stated possession of Dec 2025, yet the Projected Price Journey shows "At Possession ... 26% over 3 yrs" (extends HR-34).

Homepage

- Featured Projects in Gurgaon renders zero cards while Latest Launches directly below it renders fine (HR-01).
- Live Market Data is hardcoded text — 18.4%, ₹9,850, 6,200+, 42 days (HR-09).
- Six identical testimonials on the same `dummy.svg` placeholder avatar (HR-11).
- Raw `wa.me` URL printed as visible body text (HR-13).
- Sector list still renders "Sector 21 project" for Sector 2 (HR-06).
- Price growth chart x-axis still reads "20202026" (HR-10).

5 · Internal Linking — 65/100

Genuinely strong

Every project page links six same-developer projects, three similar projects, and a dedicated compare URL for each — an automatically generated, dense link graph that most channel-partner sites do not have. **Compare slugs are consistently sorted alphabetically** across every instance checked on both pages, so HR-50 in the dev sheet is in fact fixed; the ordering only looks inconsistent because the current project sometimes sorts second.

Gaps

- **The homepage hub is broken.** With Featured Projects rendering empty, your highest-authority page links out to about five projects instead of thirteen. Fixing HR-01 is an internal-linking fix as much as a UI one.
- **Sector pages are orphaned in one direction.** `/project-listing/gurgaon/sectors/sector-65` is the natural parent of M3M Route 65 and is not linked from it. Every project page should link its sector page; every sector page should list its projects.
- **No cross-city linking.** Gurgaon pages never link Noida or Greater Noida pages. Given Greater Noida is what is currently indexed, this is a live opportunity to pass equity into Gurgaon.
- **Blog and guides do not exist as pages.** The homepage advertises seven articles across two sections; none is clickable (HR-07, HR-08).
- Footer carries two different navigation lists with different link sets (HR-15).

6 · Trust, E-E-A-T & Compliance — 30/100

Property is a YMYL category. Google weights demonstrable trust heavily here, and this is the weakest dimension on the site.

Compliance error: the RERA link points to the wrong state regulator

Saya South X is a Uttar Pradesh project registered as `UPRERAPRJ17950`. The page links "verify" to `haryanarera.gov.in`, and its FAQ instructs buyers to "verify this on the official Haryana RERA portal at `haryanarera.gov.in`". The RERA URL appears hardcoded to Haryana regardless of the project's state. This is worse than HR-49's original finding that the number was plain text — the site now gives an actively incorrect compliance instruction to buyers, on your two Noida cities and any other non-Haryana inventory. Make the portal state-aware and re-verify every non-Gurgaon project.

Also open

- No Privacy Policy, Terms, Disclaimer, office address, GST number, or HARERA agent registration number anywhere in the footer (HR-16). For a Haryana channel partner the agent number and address are effectively mandatory, and buyers look for them before enquiring.
- Six identical testimonials on a placeholder avatar — the fastest trust-killer on the page (HR-11).
- Unsourced scale claims: 25,500+ happy customers, 45 Mn+ sq.ft area sold, 500+ skilled professionals, 750+ channel associates.
- Four awards listed (NAR Realty Awards 2025, M3M Top Channel Partner 2025, CREDAI NCR 2024, Realty+ Conclave 2024) with no links or evidence.
- Unverified project-level claims: "4-acre campus", "808 curated high-street retail" — cross-check against HARERA before publishing (HR-36).
- Credit where due: "*#1 Trusted Property Platform*" and "*100% verified listings*" have been softened, and the Investment Score now carries a methodology disclosure on the current build.

7 · AI Visibility (GEO) — 38/100 unverified

- **Brand-name collision is severe.** "Homz" resolves to Homz Global (US multifamily, \$50M raised), the HOMZ housing ETF on NYSE, HOMZ Real Estate in California, homzdeals.com and homzteam.com — all of which outrank you on the bare brand term. An assistant asked about "Homz" will not reach you.
- **No third-party corroboration found.** No directory listings, roundups, or citations pointing at homzrealtor.com surfaced in any search run. AI assistants recommend what they see cited elsewhere.
- AI-crawler policy in `robots.txt` and presence of `llms.txt` could not be verified here.

Fixes

- Always write the brand as one token plus a geography qualifier — "HomzRealtor Gurgaon", "HomzRealtor Delhi NCR" — in titles, schema, and every off-site profile.
- Create a Google Business Profile. It fixes brand disambiguation, feeds real reviews into HR-11, and takes about a week.
- Get listed in Gurgaon channel-partner and RERA agent directories, and on the developer partner pages you already qualify for.
- Publish the one dataset nobody else has: sector-level ₹/sq.ft medians for Gurgaon commercial, computed from your own inventory and refreshed quarterly. That is a citable asset.

8 · Competitor Landscape

Based on who actually occupied the result sets for your own target queries today, not on a generic competitor list.

Competitor	Position in your SERPs	What works	Opening
SquareYards	Ranks first for both M3M Route 65 and Saya South X — and is your data source	Domain authority, huge project coverage, data-intelligence framing, marketplace price medians	None while you publish their text. You cannot outrank the original with a copy. This is the relationship to break first.
Small CP microsites propzilla, upscalecommercial, futurerealtyindia, m3mindiaproperty, propsur, hedgehomes, investmango, noidacommercial	Occupy six to eight of the top ten on project queries	One page per project, original (if thin) copy, brochure and floor-plan downloads, phone number above the fold, fast indexation	This is your winnable layer. They beat you today purely because their content is original and indexed. Your template is materially better — calculators, Investment Score, config-wise pricing. It is being wasted on scraped prose.
Portals 99acres, MagicBricks, Housing, Quikr	Present on generic and mid-tail queries	Inventory scale, brand recall, direct traffic	Not winnable head-on. Do not spend on generic "property in Gurgaon" head terms.
Developer sites m3mindia.com, m3mdevelopments.com	Rank for their own brand terms	Brand authority, official brochures	Not competitors so much as suppliers. Ask for the media kits.

Strategic read: your competitive set is the channel-partner microsite layer, not the portals. Those sites are worse than you on product, design, tooling and data — and they beat you on every project query, because they publish original pages that get indexed. Fixing originality is not an SEO nicety here; it is the whole gap.

9 · What Could Not Be Verified

Four checks could not be completed from this environment. Run these and the scorecard tightens considerably.

Check	How to run it	Why it matters
Indexation census	Google Search Console → Indexing → Pages. Record the counts for <i>Discovered – currently not indexed</i> and <i>Crawled – currently not indexed</i> . Then URL-inspect the homepage, the M3M Gurgaon page, and one sector page.	The authoritative version of Section 1. Do this first.
robots.txt	Open <code>homzrealtor.com/robots.txt</code> . Confirm no <code>Disallow: /</code> , that the sitemap is referenced with an absolute URL, and that AI crawlers are explicitly allowed.	A stray <code>Disallow</code> from a staging build would explain everything in Section 1 on its own.
sitemap.xml	Open <code>homzrealtor.com/sitemap.xml</code> . Confirm it exists, is valid XML, contains every project and compare URL, and has fresh <code>lastmod</code> dates. Submit it in GSC.	With no internal path to many pages, the sitemap is the primary discovery route.
JSON-LD schema	Run both audited URLs through Google's Rich Results Test, or view-source and search for <code>application/ld+json</code> .	The FAQ, breadcrumb and product data all exist as visible content. If unmarked, you are leaving FAQ dropdowns and breadcrumb rich results on the table for free.

10 · Content Strategy

Double down — you already have the templates

- **Compare pages.** `/project-listing/compare/{city}/{a}/{b}` is your best and least contested asset. "M3M Route 65 vs M3M Corner Walk" style queries have almost no competition, and one of the two pages Google has indexed is already a compare page. Give each a unique two-paragraph intro so they are not templated duplicates of each other, and make sure they are in the sitemap.
- **Sector pages.** `/project-listing/gurgaon/sectors/sector-65` with original sector commentary, a median ₹/sq.ft figure computed from your own inventory, and the full project list. Commercial sector coverage is where SquareYards is thinnest.
- **Commercial long-tail.** "Retail shops in Sector 65 Gurgaon", "commercial property in Gurgaon under ₹2 Cr", "SCO plots Gurgaon price". Far less contested than residential, and it matches the inventory you actually carry.
- **Developer hubs.** `/developer/m3m` with original commentary and a complete project table — you already have the project counts.

Build

- The four buyer guides the homepage already advertises: RERA verification in Haryana, GST and charges on commercial property, retail-shop rental yields in Gurgaon, home-loan documentation. 1,200–1,500 words, written in-house, sourced from HARERA and RBI rather than copied.
- A free tool worth linking to. The EMI and rental-yield calculators already exist inside project pages — break one out as a standalone page.

Deprioritise

- Generic head terms — "property in Gurgaon", "flats in Gurgaon". Funded portals own these.
- Volume for its own sake. Twenty original project pages will outperform two hundred scraped ones, and the two hundred actively suppress the twenty.

Priority Roadmap

Window	Actions
Week 1 diagnose & unblock	• Google Search Console: Indexing → Pages. Record the not-indexed counts and URL-inspect three sample pages. Everything else depends on this number. • Verify <code>robots.txt</code> and <code>sitemap.xml</code>; submit the sitemap. • Fix the RERA portal link to be state-aware, and correct the FAQ text on every non-Haryana project. Compliance risk, not just SEO. (HR-49) • Purge the CDN and fix ISR revalidation so every route serves the current build, then re-QA the fix list against fresh HTML. • Move <code><Footer /></code> to the last child of the layout. (HR-25) • Wire Featured Projects to the DB — it is a linking fix, not a cosmetic one. (HR-01)
Month 1 originality & trust	• Rewrite project overviews for the top 20 projects by commercial value. 150–250 original words each, from your own DB fields and developer brochures. Measure indexation on those 20 before scaling. • Self-host every image, including <code>og:image</code>. Kill the squareyards.com hotlinks. (HR-43) • One data-mapping pass fixes the hero badges, the Connectivity Scorecard, the amenity counts and the loose bottom-of-page values — they are all the same class of bug. (HR-28 to HR-32) • Add JSON-LD: Organization on the homepage; RealEstateListing or Product, plus BreadcrumbList and FAQPage, on project pages; BreadcrumbList on compare pages. • Footer: Privacy, Terms, Disclaimer, office address, GST, HARERA agent number linked to the verification page. (HR-16) • Create the Google Business Profile; submit to channel-partner directories. • Cross-link project ↔ sector ↔ developer ↔ city in both directions.
Quarter growth engine	• Sector pages for the top 15 Gurgaon sectors with original commentary and median ₹/sq.ft from your own inventory. • Compare-page expansion with unique intro copy per pair — your least contested surface. • Replace hardcoded Live Market Data with computed figures plus NHB RESIDEX, with an "as of" date and a source line. (HR-09) • Real Google reviews via Places API, replacing the placeholder testimonials. (HR-11) • The four buyer guides, plus a standalone calculator page as a link magnet. (HR-07, HR-08) • Publish one original dataset — Gurgaon commercial ₹/sq.ft by sector — as your citable asset for both links and AI visibility.

Audit method: live production checks on rendered server HTML for homzrealtor.com (homepage), `/project-listing/gurgaon/m3m-route-65` and `/project-listing/greaternoida/saya-south-x`, plus four SERP samples run on July 29, 2026, and a cross-domain content comparison against squareyards.com. Deployment identifiers read from static asset URLs. `robots.txt`, `sitemap.xml`, `llms.txt` and JSON-LD could not be fetched from the audit environment and are marked unverified throughout — see Section 9. Bug IDs in grey reference the HomzRealtor Dev Fix List dated July 28, 2026.
