

PROJECT: Homz Realtor – Project Page SEO & UX Enhancement (2026)

CONTEXT

We currently have project pages like:

/project-listing/ggn/m3m-route-65

and lead pages like:

/project-listing/ggn/m3m-route-65/enquire

The existing UI, visual design, color scheme, spacing, cards, typography, CTA placement, and layout should remain unchanged.

DO NOT redesign the page.

DO NOT introduce a new visual language.

DO NOT modify navigation, branding, header, footer, hero section, pricing section, floor plans, gallery, brochure download, enquiry forms, or existing CTAs.

Only add new SEO-rich sections below the current project content while following existing design patterns.

GOAL

Transform every project page into an authority page capable of ranking for:

- Project Name
- Project Name Price
- Project Name Review
- Project Name Location
- Project Name Investment
- Project Name Amenities
- Commercial Property in Location
- Residential Property in Location
- Builder Name Projects
- Sector-Based Searches

All new sections must be dynamically generated from project metadata and public datasets.

===== SECTION 1: LOCATION INTELLIGENCE
=====

TITLE: "Location Intelligence"

DESCRIPTION:

Automatically generate a location analysis section using project coordinates.

Show:

- Locality Overview
- Connectivity Overview
- Road Network
- Business Hubs
- Lifestyle Infrastructure

Example:

For M3M Route 65:

Sector 65 Gurgaon is one of the most active commercial corridors on Golf Course Extension Road.

It benefits from direct access to Southern Peripheral Road, NH48 connectivity and premium residential catchments.

DATA SOURCES

Google Maps API OpenStreetMap Mapbox Government Infrastructure Sources

===== SECTION 2: CONNECTIVITY SCORECARD
=====

Display cards:

Airport Distance

Metro Distance

Railway Distance

Major Highway Access

Business District Access

Example:

IGI Airport 25-30 mins

Cyber Hub 20-25 mins

Golf Course Road 5 mins

NH48 10 mins

Calculate dynamically using coordinates.

===== SECTION 3: NEARBY LANDMARKS
=====

Create responsive cards.

Categories:

Schools Hospitals Shopping Centres Hotels Corporate Parks Metro Stations

Show:

Name Distance Travel Time

Maximum 6 per category.

Pull dynamically.

===== SECTION 4: INVESTMENT ANALYSIS
=====

Generate a unique article for every project.

Length: 700-1200 words

Must include:

- Location growth drivers
- Demand analysis
- Commercial viability
- Residential catchment
- Infrastructure projects
- Rental outlook
- Long-term appreciation potential

Example for M3M Route 65:

Discuss Golf Course Extension Road growth.

Discuss premium residential catchment.

Discuss WorldMark ecosystem.

Discuss office growth corridor.

Discuss commercial demand.

===== SECTION 5: PRICE INTELLIGENCE
=====

Create charts.

Display:

Current Project Price

Area Average

Micro Market Average

City Average

Price Trend

YoY Growth

Use:

Chart.js

Responsive design.

===== SECTION 6: BUILDER PROFILE
=====

Dynamic builder section.

Example:

M3M Group

Include:

Company Overview

Years in Business

Delivered Projects

Ongoing Projects

Upcoming Projects

Awards

Developer Reputation

Word Count: 600-1000 words

===== SECTION 7: OTHER PROJECTS BY SAME
BUILDER =====

Auto-generate project cards.

Show:

Image Price Location CTA

Minimum: 6 projects

===== SECTION 8: COMPARE WITH SIMILAR
PROJECTS =====

Generate comparison cards.

Find projects matching:

Same city

Same property type

Same budget

Same builder category

Display:

Price

Location

Possession

Area

Builder

===== SECTION 9: AREA MARKET INSIGHTS
=====

Generate market report.

Length: 800-1200 words

Include:

Current demand

Supply trends

Infrastructure impact

Future outlook

Rental demand

Commercial activity

For Gurgaon examples:

Golf Course Extension Road SPR Dwarka Expressway

===== SECTION 10: FAQ ENGINE
=====

Generate 20-30 FAQs dynamically.

Examples:

What is the possession date?

What is the nearest metro station?

What is the expected rental yield?

Is this RERA approved?

Who is the developer?

What is the investment potential?

Use FAQ Schema.

===== SECTION 11: INTERNAL LINKING BLOCK
=====

Add:

Similar Projects

Projects in Same Sector

Projects by Same Builder

Projects in Same Budget

Projects in Same City

Maximum: 20 links

===== SECTION 12: SCHEMA MARKUP
=====

Generate:

RealEstateListing

FAQPage

Breadcrumb

Organization

Product

Offer

Review

JSON-LD

===== SECTION 13: AI CONTENT RULES
=====

Every generated article must:

- Be unique
- Avoid duplication
- Use project name naturally
- Use locality naturally
- Use builder naturally
- Be SEO optimized
- Be human readable

Minimum uniqueness score: 95%

===== SECTION 14: DATA SOURCES
=====

Allowed Sources:

Google Places API

Google Maps API

OpenStreetMap

Mapbox

GeoNames

Government Infrastructure Sources

Public Real Estate Datasets

Developer Project Metadata

Never hardcode content.

Always generate dynamically.

===== SECTION 15: UI RULES
=====

CRITICAL

Use existing design system.

Use existing cards.

Use existing spacing.

Use existing typography.

Use existing colors.

Use existing responsive behavior.

No redesign.

No visual changes.

Only extend the page.

New sections must feel like they were always part of the original page.
