

===== FOUNDATION: PROJECT INTELLIGENCE
ENGINE =====

CRITICAL ARCHITECTURE REQUIREMENT

Before implementing any new content sections, build a centralized Project Intelligence Engine.

This engine will become the single source of truth for every project page, sector page, builder page, comparison page, and future SEO landing page.

NO CONTENT SHOULD BE HARDCODED.

All content must be generated from structured project data.

===== MASTER PROJECT SCHEMA
=====

Create a normalized project schema.

Example:

```
{ "project_id": "m3m-route-65", "project_name": "M3M Route 65", "slug": "m3m-route-65", "city":  
"Gurgaon", "micro_market": "Golf Course Extension Road", "sector": "Sector 65", "state": "Haryana",  
"builder": "M3M", "property_category": "Commercial", "property_sub_type": "Retail Shop",  
"project_status": "Under Construction", "rera_number": "GGM/XXX", "launch_date": "2024",  
"possession_date": "2027", "starting_price": 15800000, "max_price": 25900000, "min_size": 328,  
"max_size": 538, "land_area": 4, "latitude": "", "longitude": "", "amenities": [], "images": [], "brochure_url":  
"", "floor_plans": [] }
```

===== DERIVED DATA ENGINE
=====

Automatically derive:

Builder Information

Sector Information

City Information

Property Type Information

Investment Analysis

Connectivity Analysis

Price Intelligence

Rental Intelligence

Competition Analysis

Nearby Infrastructure

Market Trends

without requiring manual content creation.

===== DATA FLOW ARCHITECTURE
=====

Step 1

Project Data

↓

Step 2

Geo Intelligence Layer

Using:

Google Maps API Mapbox OpenStreetMap

↓

Generate:

Nearby Schools

Nearby Hospitals

Nearby Hotels

Nearby Metro Stations

Nearby Office Hubs

Nearby Shopping Centres

Travel Times

Connectivity Scores

↓

Step 3

Builder Intelligence Layer

Using builder name.

Example:

Builder = M3M

Generate:

Builder Profile

Builder Statistics

Completed Projects

Ongoing Projects

Upcoming Projects

Other Projects By Builder

↓

Step 4

Location Intelligence Layer

Using:

Sector Micro Market City

Example:

Sector 65 Golf Course Extension Road Gurgaon

Generate:

Sector Overview

Market Overview

Demand Drivers

Infrastructure Projects

Growth Potential

Rental Trends

Price Trends

↓

Step 5

SEO Content Engine

Generate:

Project Overview

Investment Analysis

Area Insights

Market Intelligence

FAQs

Comparison Content

===== CONTENT GENERATION HIERARCHY
=====

Project Page Content Must Use:

70% Structured Data

20% Dynamic Market Intelligence

10% AI Generated Narrative

Never generate generic AI content without data.

All content must reference:

Project Name

Builder

Sector

City

Property Type

Market Conditions

===== INTERNAL LINKING ENGINE
=====

Every project must automatically connect to:

Projects in Same Sector

Projects in Same City

Projects by Same Builder

Projects in Same Budget

Projects in Same Property Type

Projects with Similar Possession Dates

Projects with Similar Investment Score

Generate these relationships dynamically.

===== SECTOR PAGE GENERATION
=====

When a sector page is created:

/sector/gurgaon/65

Automatically pull:

All projects in sector

Average pricing

Builder presence

Infrastructure data

Schools

Hospitals

Market insights

No manual content entry required.

===== BUILDER PAGE GENERATION
=====

When a builder page is created:

/builder/m3m

Automatically pull:

All M3M projects

Builder profile

Builder statistics

Builder market presence

Project inventory

No manual content entry required.

===== COMPARISON PAGE GENERATION
=====

Automatically create:

/compare/m3m-route-65-vs-elan-imperial

Using structured project data.

Compare:

Price

Location

Builder

Possession

Amenities

Investment Score

Configuration

No manual content entry required.

===== FUTURE SCALABILITY REQUIREMENT
=====

Architecture must support:

500 Projects

1000 Projects

5000 Projects

without requiring code changes.

Adding a new project should automatically populate:

Project Page

Builder Page

Sector Page

City Page

Comparison Pages

Internal Links

SEO Content

Structured Data

without manual intervention.

===== ADMIN REQUIREMENT
=====

When a new project is added in admin:

All intelligence layers should generate automatically.

No developer involvement should be required.

Admin only enters:

Project Details

Location

Builder

Pricing

Inventory

Images

Floor Plans

Everything else should be system generated.
